

### Low voltage high bandwidth quad SPDT switch

#### Datasheet - production data

#### **Features**

- Ultra low power dissipation:
  - I<sub>CC</sub> = 0.3  $\mu$ A at T<sub>A</sub> = 125 °C
- Low on-resistance:
  - R<sub>DS(on)</sub> = 4  $\Omega$  (T<sub>A</sub> = 25 °C) at V<sub>CC</sub> = 3.0 V
- Wide operating voltage range:
  - V<sub>CC</sub> (opr) = 1.65 V to 4.3 V single supply
- 4.3 V tolerant and 1.8 V compatible threshold on digital control input at V<sub>CC</sub> = 2.3 V to 3.0 V
- Typical bandwidth (-3 dB) at 800 MHz on all channels
- Latch-up performance exceeds 100 mA per JESD 78, Class II
- ESD performance exceeds JESD22
  - 2000-V human body model (A114-A)
- USB (2.0) high speed (480 Mbps) signal switching compliant

#### **Description**

The STG3693 is a high-speed CMOS low voltage quad analog SPDT (single pole dual throw) switch or 2:1 multiplexer /demultiplexer switch fabricated in silicon gate C2MOS technology. It is designed to operate from 1.65 V to 4.3 V, making this device ideal for portable applications.

The nSEL inputs are provided to control the switch. The switch S1 is ON (it is connected to common ports Dn) when the nSEL input is held high and OFF (high impedance state exists

between the two ports) when SEL is held low; the switch S2 is ON (it is connected to common Port D) when the nSEL input is held low and OFF (high impedance state exists between the two ports) when nSEL is held high. Additional key features are fast switching speed, break-before-make delay time and ultra low power consumption. All inputs and outputs are equipped with protection circuits against static discharge, giving them ESD immunity and transient excess voltage.

STG3693 Maximum ratings

## 3 Maximum ratings

Stressing the device above the rating listed in the absolute maximum ratings table may cause permanent damage to the device. These are stress ratings only and operation of the device at these or any other conditions above those indicated in the operating sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability. Refer also to the STMicroelectronics SURE program and other relevant quality documents.

Table 4. Absolute maximum ratings

Symbol	Parameter	Value	Unit
V <sub>CC</sub>	Supply voltage	-0.5 to 5.5	V
VI	DC input voltage	-0.5 to V <sub>CC</sub> + 0.5	V
V <sub>IC</sub>	DC control input voltage	-0.5 to 5.5	V
Vo	DC output voltage	-0.5 to V <sub>CC</sub> + 0.5	V
I <sub>IKC</sub>	DC input diode current on control pin (V <sub>SEL</sub> <0V)	-50	mA
I <sub>IK</sub>	DC input diode current (V <sub>SEL</sub> <0V)	±50	mA
I <sub>OK</sub>	DC output diode current	±20	mA

#### **IMPORTANT NOTICE - PLEASE READ CAREFULLY**

STMicroelectronics NV and its subsidiaries ("ST") reserve the right to make changes, corrections, enhancements, modifications, and improvements to ST products and/or to this document at any time without notice. Purchasers should obtain the latest relevant information on ST products before placing orders. ST products are sold pursuant to ST's terms and conditions of sale in place at the time of order acknowledgement.

Purchasers are solely responsible for the choice, selection, and use of ST products and ST assumes no liability for application assistance or the design of Purchasers' products.

No license, express or implied, to any intellectual property right is granted by ST herein.

Resale of ST products with provisions different from the information set forth herein shall void any warranty granted by ST for such product.

ST and the ST logo are trademarks of ST. All other product or service names are the property of their respective owners.

Information in this document supersedes and replaces information previously supplied in any prior versions of this document.
